# Nutrisoil News

Issue 1 May 2006

**W**elcome Nutrisoil clients to our first newsletter. We look forward to updating you on Nutrisoil developments and latest scientific discussions on soil biology and responsible land management techniques. Please feel free to contribute eg. Nutrisoil trials and/or results you can share with others.

**Autumn break!** Now is the time farmers are looking to the skies for some consistent rain to give recently sown crops and pasture the start they need. As soon as you detect any growth, this is the best time to apply Nutrisoil to activate the soil biology through increasing soil life such as microbe levels and encouraging earth worms that aerate your soils. Due to vermiculture (worm) process Nutrisoil can be instantly taken up by plants. Increasing nutrient levels and unlocking of existing nutrients are other major benefits of applying Nutrisoil now.

**Seed Inoculation.** Cereal growers in Harden are getting huge benefits from inoculating grain with Nutrisoil before sowing. "We are saving 20% on fertilizer costs by spending 50 cents per Hectare on inoculating the grain with Nutrisoil concentrate before sowing. Then in August a foliar spray with Nutrisoil costing \$50 per hectare as against \$228 per hectare on conventional fertilizers. Head weights 3 to 8 grams heavier on Nutrisoil area compared with control" Peter Webber Harden N.S.W.

*In every ml of Nutrisoil LS there are millions of natural soil microbes!  
Nutrisoil encourages the worm population in your soil resulting in natural aeration!*

**Nitrogen.** Whilst legumes can get nitrogen out of the air, they don't get it all from the air. A certain percentage still has to be supplied by microbial activity in the soil or by a commercial source. When choosing between these options you must consider the consequences. Choosing commercial nitrogen will start making the soil more and more reliant on this source. If biology is the choice, you must ensure that the environment is sufficiently supported to maximize the efficiency of microbes. The better we can support a naturally balanced environment, the more efficient we make those microbes.

**Price Rise.** Order all your 2006 fertiliser needs before July this year to pay 04/05 financial year prices. This is mainly due to transport cost increases. After July, Nutrisoil prices will increase by 10% or 5% for 1000L orders. Nutrisoil is still the most affordable cost effective fertilizer that has highly beneficial cumulative effects rather than demanding increasing applications.

**Information Packages** including the Nutrisoil story, benefits, analysis, pricelist, application, order form, testimonials etc are available. Please phone or email your details so we can post one out for you or a friend today!

**[www.nutrisoil.com.au](http://www.nutrisoil.com.au)**

The internet is a **great** way to learn more about Nutrisoil, make enquiries and orders. Check out the Free 2L Nutrisoil promotion for new customers to trial.

**American Express (AMEX)** is now available for payments as well as other major credit cards such as Mastercard, Bankcard & Visa.

**Freight free!** In the majority of cases we have been able to freight or deliver to the door free (with the exception of some destinations where we have still negotiated sharing the costs).
