

NutriSoils®

Issue 2 September 2006

Nutrisoil On-Farm Field Day
We had a tremendous response to our July Field Day with close to 200 people attending. Farmers were able to observe the pastures after 13 years of only vermiculture programs.

Product developer, Graham Maddock explained the Nutrisoil Story including an inspection of the production windrows. Rachelle talked about the benefits of soil micro-organisms and Max gave an update on experiences in the field. We were fortunate to have Nathan Heath, Soil Health Project Officer from Wodonga DPI speak on the water holding capacity of soil. After a BBQ lunch, there was a farm-walk and Trevor Parker from Corcoran Parker spoke on current beef market trends.

Farmers were highly impressed by how the pasture stood up after the lack of Autumn break. The paddock they were inspecting was 7ha with 80 feedlot cattle and had been treated with 10L/ha Nutrisoil.

Inspirational Leaders in Soil Health!

As part of our commitment to product and knowledge enhancement we have attended some inspirational talks by stand-out professionals in the field of soil health. Rachelle attended a 2-week uni short-course in July with Dr Elaine Ingham. This was a fantastic way to delve into the science of soil.

Rachelle came back enthusiastic about all things microscopic which has been of great benefit to understanding more about why Nutrisoil is so effective. "Soil organisms create a living, dynamic system that needs to be understood and managed properly for best plant growth." Ingham, 2006 www.soilfoodweb.com.au is a great website to familiarize yourself on and learn how to monitor your soil biology.

Graham and Lyn attended a 3-day seminar with Dr Arden Anderson who emphasized the importance of biological and chemical balance in soils. "No number is perfect unless all numbers are perfect." Anderson, 2006

We have had the privilege to see Dr Maarten Stapper several times now and always find him inspiring. "Agricultural systems are addicted to the soluble acidic-based NPK fertilizers and this addiction supported by pesticides and herbicides, leads to soil degradation". Stapper, 2006.

Spring Field Days!

Nutrisoil LS will be represented at the following field days this Spring. Call in for a cuppa and chat!

Henty 19th 20th 21st September

Elmore 3rd 4th 5th October

Orange 17th 18th 19th October

NutriSoils® New Price List

Container Size	Price per Litre	Cost (inc GST)
2L	\$10.35	\$22.77
5L	\$7.48	\$41.14
25L	\$5.50	\$151.25
200L	\$4.40	\$968.00
1000L	\$4.20	\$4,620.00
